Dear Hiring Committee,

My name is Poramat Sangsaengsai, an Electrical & Electronics Engineer with a Master's degree (GPA 3.83) from Kasetsart University. Over the past several years, I have independently built more than seven hardware and software projects spanning PCB design, embedded firmware, IoT cloud integration, and AI-driven development — not as coursework, but as end-to-end systems I designed, built, and deployed myself.

What sets me apart is the ability to move fluidly across the full stack: from schematic capture and low-level C++ firmware on ESP32 microcontrollers, to cloud APIs, RESTful backends, and LLM-orchestrated AI systems. My Three-Phase Power Measurement & Data Logging System achieved commercial-grade measurement accuracy while remaining cost-efficient and scalable — a balance that required precision at every layer, from CT sensor calibration to real-time smartphone visualization. Most recently, I architected a Mixture-of-Agents AI chatbot integrating Gemini and Groq APIs, and built a private cloud storage system with AI-driven file classification and OAuth 2.0 security — demonstrating that my engineering scope extends well beyond hardware.

I thrive in roles where hardware meets software meets intelligence. Whether the challenge is power systems, embedded IoT, or intelligent automation, I bring a systems-level mindset that ensures every component — from the microcontroller to the backend — works as a cohesive whole.

I would welcome the opportunity to discuss how my background can contribute to your team's goals.

Sincerely,

Poramat Sangsaengsai

Poramat Sangsaengsai (Palm)
